

# Prerequisites

## Create External Client App

**Use:** An external app is required to allow **React** signing application users to access Salesforce app data and save the signatures and documents back to Salesforce.

Steps:

1. Go to **Setup > External Client Apps > External Client App Manager**.
2. Click on New External Client App.
3. In External Client App name, enter SA Connect. Also enter your email address in the Contact Email Field.
4. In API Settings section, Check the enable OAuth checkbox.
5. Add <https://login.salesforce.com/> as the Callback URL.
6. Select Manage User Data via APIs (api) from the OAuth Scopes.
7. From Flow Enablement section, Check the Enable Client Credentials Flow checkbox.
8. From Security Section below, deselect the Require Secret for Web Server Flow, Require Secret for Refresh Token Flow and Require Proof Key for Code Exchange (PKCE) Extension for Supported Authorization Flows.
9. Click on Create button.
10. On the next screen, click on Edit button in the policies tab.
11. Click on Enable Client Credentials Flow checkbox from OAuth Flows and External Client App Enhancements Section.
12. Enter the username for the Least Accessible User.
13. Click on the Save button.
14. Go to the Settings section and click on Consumer Key and Secret button from OAuth Settings and verify your identity.
15. Copy the **Consumer Key** and **Consumer Secret** and store them

**Note:** It is not recommended to assign the **System Administrator User** as the **Run As User**.

## Create the Least Accessible User (Recommended)

**Use:** For the connected app created in the previous section. It is recommended to create a **new user** instead of any other integration user to restrict and note the changes made by the Application.

**Steps:**

1. Go to **Setup > Users > Users**.
2. Click on **New User**.
3. Enter the name as '**SignAny Integration User**'. Any other name will cause issues in the **TimeZone and Location** in the **Audit Report**.
4. Change the **User License** to **Salesforce**.
5. Change the **Profile** to **Minimum Access - Salesforce**.
6. Make sure the User is **Active**.
7. Click **Save**.
8. From the **Permissions Set Assignment** Section, click on **Edit Assignments**.
9. Select the '**Sign Any Object/Metadata Permissions**' and Click **Save**.

## Set up Change Data Capture

**Use:** Configure the message channel and allow quick data update.

**Steps:**

1. Go to **Setup > Integrations > Change Data Capture**.
2. From the **Available Entities**, select **Admin Properties (Admin\_Properties\_\_c)** and move it to the right.
3. Now, select **Document (Document\_\_c)** and move it to the right too.
4. Click on **Save**.

## Enable Lightning Security:

**Use:** To show PDF file previews.

**Steps:**

1. Go to **Setup > Security > Session Settings**.
2. Under the **Lightning Web Security** section, tick the checkbox for **Use Lightning Web Security for Lightning web components and Aura components**.
3. Click on **Save**.

**Note:** If this is not done, the user will never be able to see the preview for the uploaded file.

## Check the email Deliverability

**Use:** To send emails to Signers for Document Signing.

**Steps:**

1. Go to **Setup > Email > Deliverability**.
2. Under the **Access to Send Email (All Email Services)** Section, set the **Access level** to **All email**.
3. Click **Save**.

**Note:** As of December 2025, emails are being sent via Gmail Integration. This will be changed to Salesforce Messaging Class Emails.

# Admin Panel

## Purpose:

- Provide configuration options that control document behaviour.
- Allow administrators to customise how the signature pad appears and functions for signers.

## Fields on Admin Panel:

The admin panel contains two categories:

1. Document Settings
2. Signature Pad Configuration

### 1. Document Settings

Controls how the system behaves when preparing and processing a document for signing.

The screenshot shows the Admin Panel interface. At the top, there is a navigation bar with a search bar and various icons. Below the navigation bar, the 'Admin Panel' title is displayed. The main content area is divided into two sections: 'Document Settings' and 'Signature Pad Configuration'. The 'Document Settings' section includes a dropdown for 'Email Object' (set to 'None'), a dropdown for 'Audit Report Behaviour' (set to 'Separate'), and two checkboxes: 'Store Sign as Record in Salesforce' and 'Send Email to Signer after Signing'. The 'Signature Pad Configuration' section includes a 'Drawing Options' subsection with three checkboxes: 'Hide Pen and Erase Option', 'Hide Brush Size Option', and 'Hide Undo and Redo Option'. There is also a 'Brush Size' input field set to '2'. At the bottom, there is a 'Font Style' input field and 'Clear' and 'Save' buttons.

## Document Settings

### a. Email Object:

- i. Determines which Salesforce object provides the email and name values for signers.
- ii. When any object is selected (other than "None"):
  1. The signer selection screen displays a picklist containing that object's records.
  2. On selecting a record:
  3. The system auto-fills the signer's name and email.
  4. The auto-filled email becomes **non-editable** to ensure accuracy.

- iii. Helps ensure that signers are selected from reliable Salesforce records.
- b. **Email Field:**
  - i. Defines which field from the selected Email Object supplies the email address.
  - ii. Example:
    - 1. If Email Object = Contact and Email Field = Email, then:
    - 2. Name is auto-populated from the Contact's Name field.
    - 3. Email is auto-populated from the Contact's Email field.
  - iii. Ensures consistent and accurate population of signer information.
- c. **Audit report behaviour:**
  - i. Provides two modes that determine how the audit report is delivered:
    - 1. **Separate:** Generates a standalone PDF representing the audit activity.
    - 2. **Attached:** Appends the audit pages to the end of the signed document PDF.
  - ii. Helps organisations decide how they want the audit to be distributed and archived.
- d. **Store sign as a record in Salesforce:**
  - i. When enabled (checkbox):
    - 1. Every signature captured during signing is stored as a ContentVersion record.
    - 2. The record is saved under the related Signature\_\_c object.
    - 3. Signature\_\_c maintains a master-detail relationship with Document\_\_c, ensuring signatures stay linked permanently.
    - 4. The signature has no expiration and can be reviewed anytime.
  - ii. When disabled:
    - 1. No ContentVersion is created, but the signatures are stored in Salesforce.
  - iii. Useful for organisations needing long-term retention of signature files.
- e. **Send an email to the signer after signing:**
  - i. When enabled (checkbox):
    - 1. Both the signer and the person who initiated the document receive an email when a signature is completed.
    - 2. Provides real-time tracking and transparency in the workflow.
  - ii. When disabled:

1. The document progresses to the next step silently, without triggering notifications.

## 2. Signature Pad Configuration

- Allows tailoring the signer's signature input experience on the signing page.

The screenshot shows the 'Admin Panel' with the 'Signature Pad Configuration' section. The 'Drawing Options' section includes checkboxes for 'Hide Pen and Erase Option', 'Hide Brush Size Option', and 'Hide Undo and Redo Option'. The 'Brush Size' is set to 2. The 'Font Options' section includes a checkbox for 'Hide Available Fonts Option' and a 'Font Style' dropdown set to 'Artecallya'. The 'Available Font Styles' section shows a list of available fonts (Monsieur La Doulaise, Mrs Saint Delafield, Bettina, High Summit) and a 'Selected' list (Artecallya, Barokah). At the bottom are 'Clear' and 'Save' buttons.

Signature Pad Configuration (1)

- Includes settings for drawing tools, typography controls, and visibility of UI elements.

The screenshot shows the 'Admin Panel' with the 'Signature Pad Configuration' section. The 'Font Options' section includes a checkbox for 'Hide Available Fonts Option' and a 'Font Style' dropdown set to 'Artecallya'. The 'Available Font Styles' section shows a list of available fonts (Monsieur La Doulaise, Mrs Saint Delafield, Bettina, High Summit) and a 'Selected' list (Artecallya, Barokah). The 'Text Formatting Options' section includes checkboxes for 'Hide Bold Option', 'Hide Italic Option', and 'Hide Font Size Option'. The 'Font Size' is set to 50. At the bottom are 'Clear' and 'Save' buttons.

Signature Pad Configuration (2)

### a. **Hide pen and erase option:**

- i. Toggles the visibility of the **Pen** and **Erase** controls in the drawing popup.
  - ii. Useful when organisations prefer typed signatures only.
- b. **Hide Brush Size Option:**
  - i. Controls whether signers can adjust the brush thickness for both pen and eraser.
  - ii. When hidden, the brush always uses the default size.
- c. **Brush Size:**
  - i. Defines the **default drawing stroke size** (range: 1–10).
  - ii. Applies to both pen strokes and eraser lines when brush size controls are hidden.
- d. **Hide undo and redo options:**
  - i. Determines whether the signer can undo or redo their drawing actions.
  - ii. Organisations can lock the signing experience to avoid repeated modifications.
- e. **Hide available fonts option:**
  - i. When enabled, it prevents the signer from choosing different fonts while typing signatures.
  - ii. Restricts the appearance of typed signatures to the default selected font.
- f. **Font style:**
  - i. Defines the **default font** that appears when the signer types a signature.
  - ii. Works only when typed signatures are allowed.
- g. **Available font styles:**
  - i. A dual picklist allows administrators to choose which fonts appear as selectable options.
  - ii. Signers will only see the fonts included in this configuration.
- h. **Hide bold option:**
  - i. Removes the ability for signers to apply **bold formatting** to typed signatures.
- i. **Hide Italics option:**
  - i. Removes the ability for signers to apply **italic formatting** to typed signatures.
- j. **Hide font size option:**
  - i. Hides the font-size dropdown from the signature typing interface.
  - ii. Forces all typed signatures to use the default configured size.
- k. **Font size:**
  - i. Sets the **default** size for typed signature text.
  - ii. Applies when the font-size selector is hidden or before the user makes changes.

# Document Signer

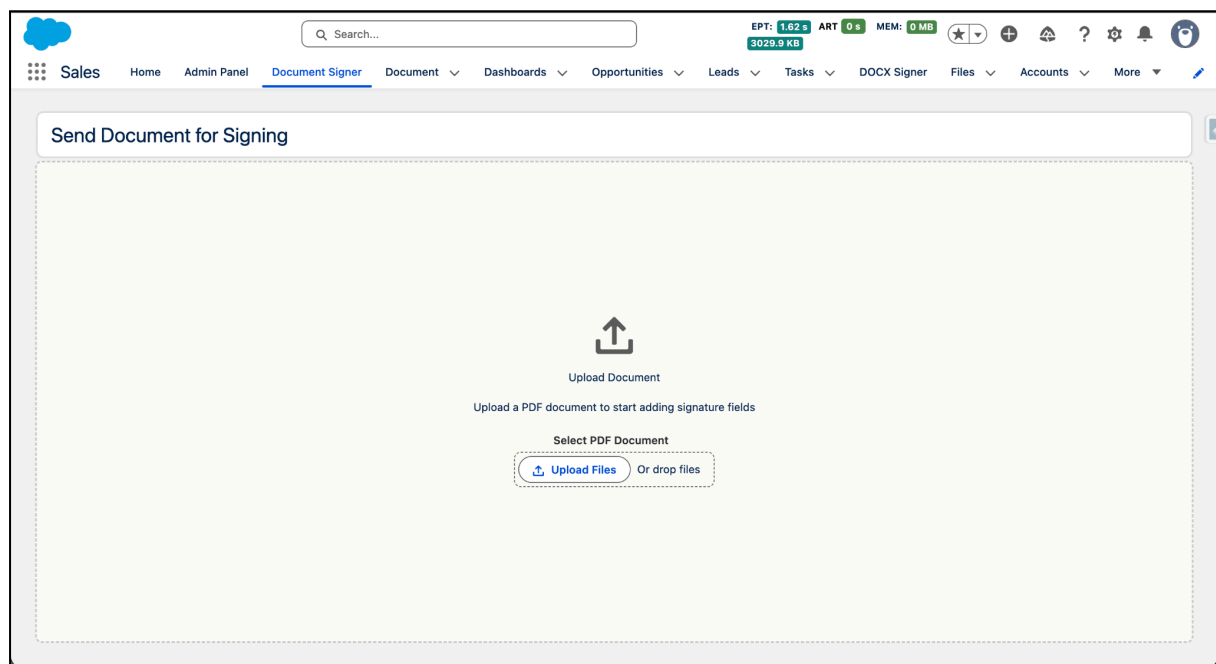

## Purpose

- Allow the users to upload their PDF document, put signature placeholders and different fields, and send it to the users for signing.

## Steps to Send Signature for Signing

**Step 1:** Open the Document Signer Tab.

**Step 2:** Click on the Upload Files button and upload the PDF document you want to get signed.

Document Signing Page

**Step 3:** On the desktop, click the "**Add Person**" button on the left side of the screen. You might need to scroll down the left sidebar to see the button.

'Add Person' button

**Step 4:** Select a record or start by typing the Name and Email of the first signer.

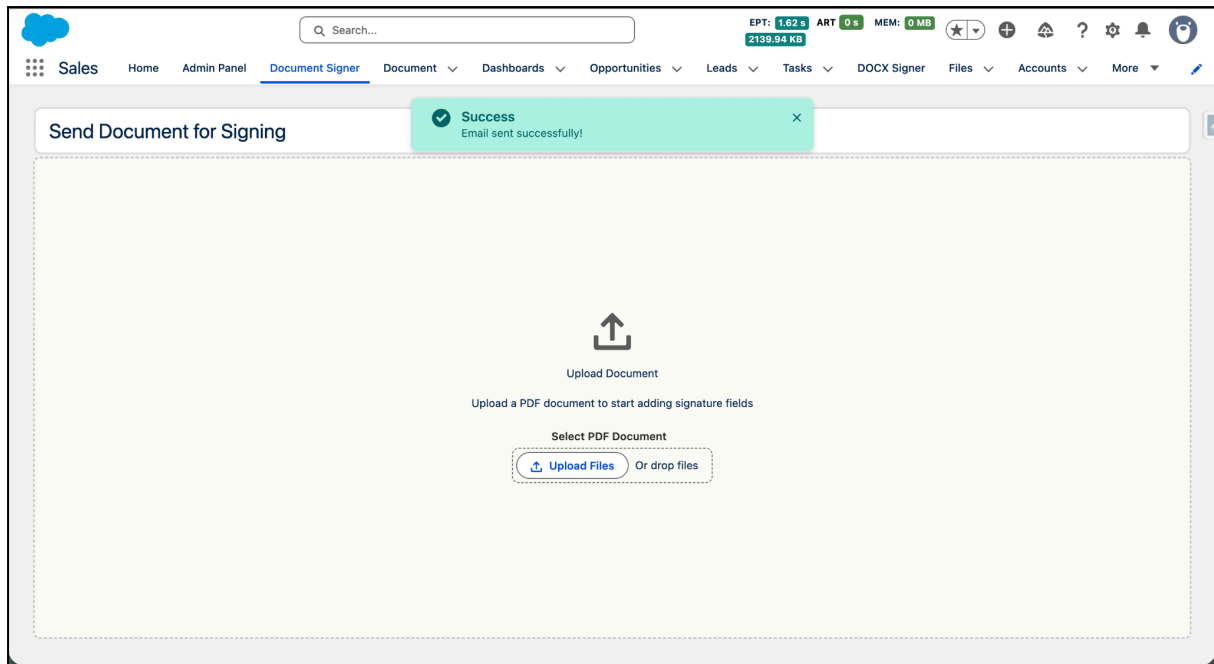

**Step 5:** Now, click on the signature button below the add fields and click anywhere on the document PDF page to place the button placeholder.

**Step 6:** You can put any button of your choice from the options available, such as text, date, number, email, checkbox or initials.

**Step 7:** Repeat the steps from 3 - 6 to put another person for signing.

**Step 8:** Typically, the first person in the sidebar list receives the first email to sign, followed by the second person, and so on. You can change the order of the email sending process by clicking the up or down arrow beside the person icon in the heading of each person's card.

**Step 9:** When completed, click the "Send for Signing" button to send the document via email.

Send Successfully Toast Message

## Collapsible sidebar items

The left side (only displayed for desktops) has items that may span the height of the medium-sized laptop screens. For this reason, all the persons and the document settings are collapsible and expandable.

- Clicking the **collapse icon** on the top right of the card will collapse the card in the form of a list item. For the person card, this is to the left of the remove (cross icon).
- In the collapsed view, the field can be expanded again by clicking the **expand icon** at the same position. This will revert the list item back to the card.

## Document Settings

A few properties for the document related to email and expiry can be modified for the document.

- The **additional email recipient** field is given to provide a user with access to the document changing status without any involvement in the document as a signer or sender. The recipients will be informed via email in case the document is **finished**, **stage changes** (need to be configured) or **rejected**.
- The Document's email for signing can be modified. The **email subject** can be completely modified to suit the user's preferences or company standards to track them.
- An **additional body** or a line of message can be sent by the document sender to all the email recipients. This message is displayed below the salutations. Entering the email body will not omit any part of the message that is sent by this application.
- There is an option to **send the document for signing to all the recipients** mentioned at the same time. If there is only one recipient, the document will act in the same way regardless of whether the checkbox is checked or not. When this is selected, the audit report will be generated only after all the signers have completed signing the document.
- The **expiration property** of the document can be set in two types: one-time and recurring. When **one-time** is selected, the **expiration date** will not be updated, while for **recurring**, the **expiration date** will be updated every time a document is updated by signing and submitting it. The recurring option is not available when the "**Send email simultaneously**" checkbox is selected.

- Next to the expiration type, the field **expiration days** sets the **expiration date**. The number of days will be added to the current date, and an expiration date will be generated and stored in the record without showing to the user. So, if 12 is selected and the current date is 1st December, the expiration date will be set to 1st December + 12 days = **13th December**.

## Document Settings Section

- A **reminder** can also be set for the document signers. The calculation of the reminder is the same as the expiration date; the number of days will be added to the current date, and the **reminder date** will be generated and stored in the record. In reminder dates, **0** means no reminders to be sent to the document signers.

**Note:** Reminders are only sent if the signer has not signed by the reminder date.

## Person Management

Multiple signers can be added to sign a single document.

- As of now, up to 5 signers can be added to a single document.
- The signers can be added (if fewer than 5) from the add person button on the desktop screen.
- If you want to remove a person from the list, clicking on the cross icon in the top right corner of the screen will remove the field. If a person is removed, the fields placed on the document will be removed. There is no way to undo the removal of the person. (You can add the new person, but the data will be lost.)
- When more than one person is involved, the ordering of the person can be changed using the up and down arrows. Clicking the up arrow will move the person's position up by one, and clicking the down arrow will move the person's position down by one.

- A person's position in the left sidebar determines the order in which the document email for signing will be sent. The topmost person is sent the first email, and when the document is signed, it will be sent to the second person in the list and so on.

## Fields Classification

The fields put in the document can be of different types. The design was made to make each of the fields unique and can be used to handle different requirements. Field types are classified as below:

1. **Signature Field:** This is the key field for the document. For the document to be valid for signing, there must be at least one signature field for any of the persons placed on the document. The signature field is required, meaning the document signer must fill it in before submitting the document.

The screenshot displays the DocuSign 'Send Document for Signing' interface. The top navigation bar includes a search bar and various menu items like Sales, Home, Admin Panel, Document Signer, Document, Dashboards, Opportunities, Leads, Tasks, DOCX Signer, Files, Accounts, and More. The main content area is titled 'Send Document for Signing' and shows a 'Document Preview (2 pages)' of a 'CERTIFICATE OF LIABILITY INSURANCE' from ACORD. The document includes fields for Producer, Insured, and Insurers. On the right, a sidebar for 'Person 1' allows adding fields to the document. The 'Add Fields' section includes a 'Signature' field (highlighted in blue), 'Text Field', 'Date', 'Number', 'Email', and 'Initials'. At the bottom of the sidebar are buttons for '+ Add Person', 'Reset All', and 'Send for Signing'.

### Signature Field

2. **Text Field:** This field can be used to fill in the details in the form of text. The field can be configured to take a single line of text or multiple lines of text based on the requirements. Various other configurations can be discovered by the user on double-clicking on the text field that has been placed on the document.
3. **Date Field:** This field can take a single date from the user. Multiple configurations, such as date format, etc, can be set so that the date appears in that format after signing the document.
4. **Number Field:** This field can be exclusively used to allow users to enter a number, a phone number or even a currency amount.

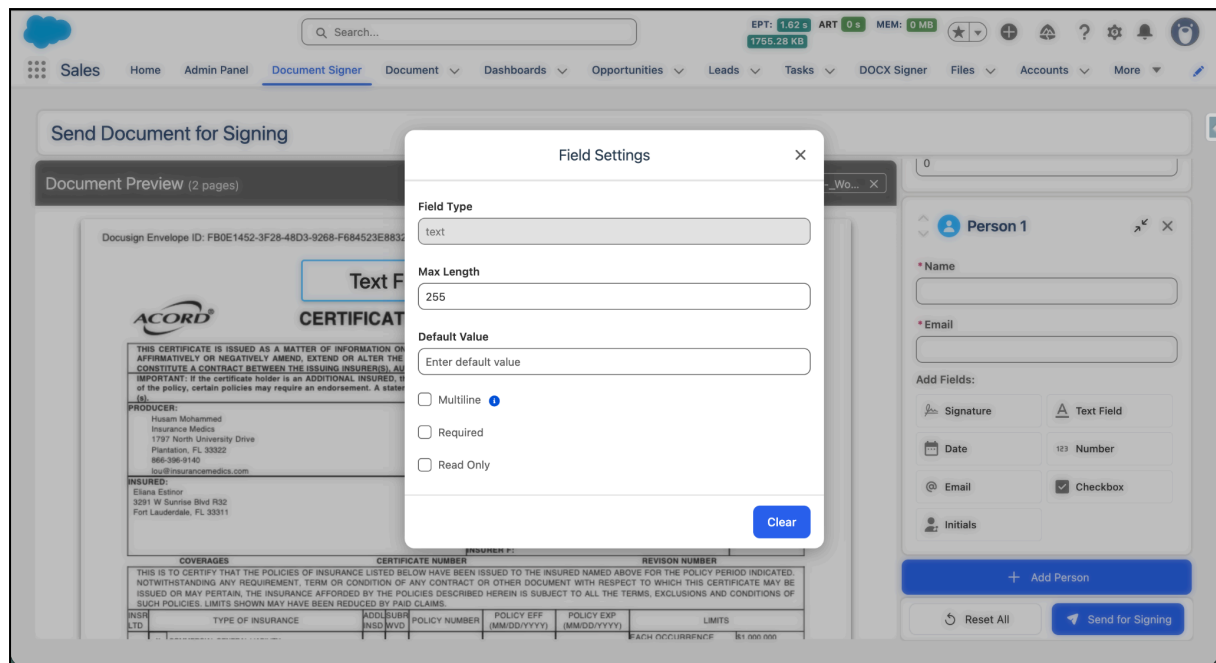

5. Email Field: This field is made to allow users to take an email as input and put it in the document. The user can only put one email address that will be validated upon signing in to ensure it is syntactically correct.
6. Checkbox Field: This field puts a checkbox on the document.
7. Initials Field: This field can be used to take a short input (usually a person's initials) from the user. The text will automatically be converted to uppercase for this field.

Note: Only one signature can be put for a person. According to this, a document can have up to 5 signatures per document. As for the other fields, there is no hard limit for fields, but putting too many of them may cause performance issues on the document signing page.

## Edit the configurations for a field

The fields placed on the document are configurable to a level that allows the document senders to make the document signing experience easier.

- a. The fields that are placed on the document are **draggable**, meaning that they can be freely moved from one place to another on the document page.
- b. Few fields, such as the signature field and the text fields, can be resized to a certain level to allow the document owners to adjust the field according to their requirements and the document sizes.
- c. Some of the properties can be adjusted for a field, such as making them required for the signer, setting a default value, maximum and minimum values, etc. You can discover these properties by double-clicking on the field.
- d. Once placed, the field can also be removed. On hovering the field, a red cross icon appears at the top right corner of the button. Clicking on this button will remove the field.

Field Options

## Reset the Document

There are two types of reset buttons available for the document.

- 'Reset all' button on the left sidebar

This button will remove all the persons and their information and fields. It will also reset all the changes made to the Document Settings and revert them to default values.

- Cancel button next to the file name

There is an option to remove the file and upload a new file. This can be done by clicking the cross icon next to the file name on the document preview heading. Doing this will not only reset all the persons, fields and document settings but will also remove the file.

**Note:** Both of the reset page changes are irreversible, and the data will not be saved. Please use it with caution and only when necessary. A confirmation pop-up will be shown when either of the buttons is clicked to prevent a reset on misclicking.

**Note:** The page is made to prevent accidental refresh. Once the document is uploaded, and if there are any unsaved changes, the Salesforce page will be prompted before accidental refresh or closing of the page.

## Mobile Responsive Design

The document signing application is made to be mobile-friendly so that it can send documents using a mobile device with near-zero limitations compared to the desktop version.

- The left sidebar is moved and converted to a bottom bar that is a collapsed slider. The cards for the document settings and persons have been converted into pills on the bottom bar.
- The slider can be opened via either clicking on the 'pills' or sliding or clicking on the horizontal bar above the pills.
- The persons can be added from the plus button on the right side of the pills container. Similarly, they can be removed by clicking the close button on the right side of the pill.
- The feature for reordering persons has been moved inside the card. Now, after expanding the bottom bar, a person can be reordered from the left and right arrows on the top-right corner of the heading. In mobile devices, priority is set from left to right.
- Since the screens for mobile devices can be small, a feature to zoom the page is available only for mobile devices. A document can be zoomed up to 200% of the mobile screen size.

# Signature Page

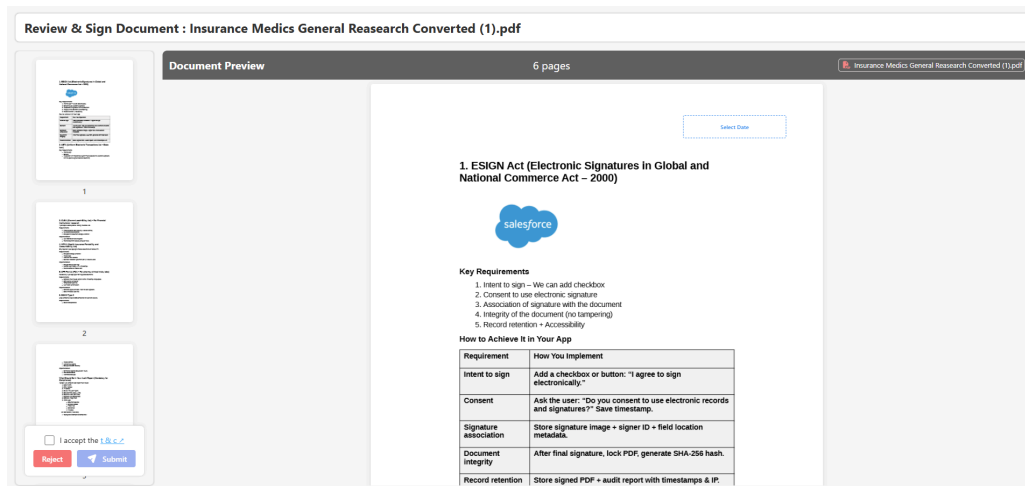

# Signature Page User Guide

## Purpose

- This guide provides comprehensive instructions for signers to review documents, complete all required fields, apply signatures, and successfully submit or reject documents using the Signature Anywhere platform.

## General Guidelines

- **Accessing Your Document**
  - Click the secure link provided in your email invitation
  - The document will load automatically in your browser
  - Review the document name and page count in the header
  - Use the page thumbnails on the left sidebar to navigate between pages

## Document States

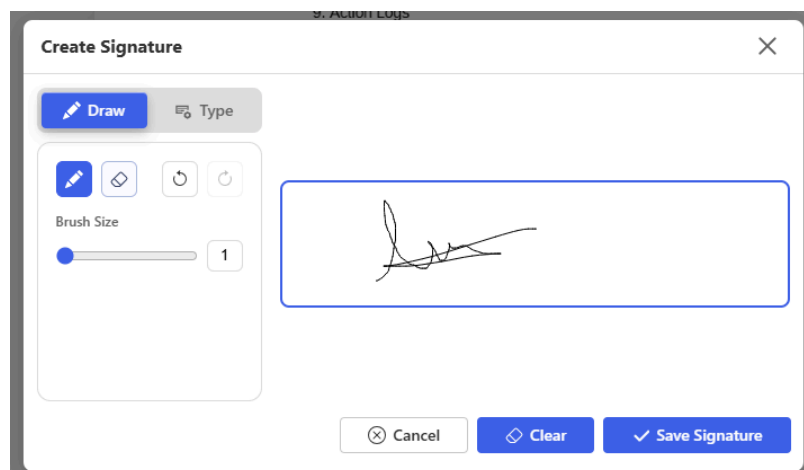

- **Active Document**
  - Available for signing with all fields accessible
  - Shows signature and input fields highlighted on the document
- **Inactive Document**
  - Document has been deactivated by the sender
  - Displays inactive status message
  - Contact sender for more information
- **Expired Document**
  - Displays expiration notice with sender contact information
  - No longer available for signing
  - Contact the sender to request a new link
- **Already Submitted**

- Shows notification if document was already signed in another browser/tab
- Prevents duplicate submissions
- Page automatically refreshes to show current status

## Signature Types

### 1. Draw Signature

- Click on any signature field to open the signature modal
- Select the Draw tab
- Use your mouse, touchpad, or touchscreen to draw your signature
- Tools Available (based on admin configuration):
  - Brush Size: Adjust line thickness
  - Pen/Erase: Switch between drawing and erasing modes
  - Undo/Redo: Correct mistakes easily
  - Clear: Start over completely
- Click Save to apply your signature to the field
- Click Cancel or press ESC to close without saving

### 2. Type Signature

- Click on any signature field
- Select the Type tab
- Enter your full name in the text box
- Customization Options (based on admin configuration):
  - Font Style: Choose from available font families
  - Font Size: Adjust text size
  - Bold: Make text bold
  - Italic: Apply italic styling
- Preview updates in real-time
- Click Save to apply
- Click Cancel or press ESC to discard

### 3. Quick Reuse Signature

- After signing your first signature/initial field, a **Sign Here** button appears on subsequent fields of the same type
- Click the button to instantly apply your saved signature
- Saves time when multiple signatures are required
- Works separately for signatures and initials
- Only available for fields assigned to your priority level

## Input Field Types

### 1. Text Field

- Click on the field to activate inline editing
- Type your text directly into the field
- Multiline Support: Press Enter for new lines (if configured)
- Text automatically wraps within field boundaries
- Maximum character limit enforced if specified
- Can be marked as required

Insurance Medics General Research Converted (1).pdf

• QTSF Providers for eIDAS, AES & QES:

1. InfoCert – Qualified certificates, remote QES signing, large enterprise support.
2. Namiral – AES + QES APIs, video ID verification, mobile signing.

3. DigiIdentity – Cloud-based certificates, remote AES/QES.

4. GlobalSign – QES from EU entity, timestamping, PKI infrastructure.

5. D-Trust – Government backed QTSF, highly secure, QES remote signing.

6. Idnow – eID verification + AES/QES issuing, identity workflows.

7. SSL.com – EU-qualified signing certificates, easy API.

8. Unisecure – Identity hub + remote signing with QES.

How to get eIDAS AES/QES:

- Choose any QTSF above.
- Sign a commercial contract.
- Integrate their signing API.
- They issue all certificates and timestamps.
- Your app becomes eIDAS AES/QES compliant.

Cost : €2,000 – 65,000/year basic plan

☐ Enter Text

## 2. Number Field

- Click to activate inline editing
- Only numeric input allowed (0-9)
- Decimal points supported
- Invalid characters automatically rejected
- Can have minimum/maximum value restrictions

Insurance Medics General Research Converted (1).pdf

**Key Requirements**

1. Intent to sign – We can add checkbox
2. Consent to use electronic signature
3. Association of signature with the document
4. Integrity of the document (no tampering)
5. Record retention + Accessibility

**How to Achieve It in Your App**

| Requirement           | How You Implement                                                                        |
|-----------------------|------------------------------------------------------------------------------------------|
| Intent to sign        | Add a checkbox or button: "I agree to sign electronically."                              |
| Consent               | Ask the user: "Do you consent to use electronic records and signatures?" Save timestamp. |
| Signature association | Store signature image + signer ID + field location metadata.                             |
| Document integrity    | After final signature, lock PDF, generate SHA-256 hash.                                  |
| Record retention      | Store signed PDF + audit report with timestamps & IP.                                    |

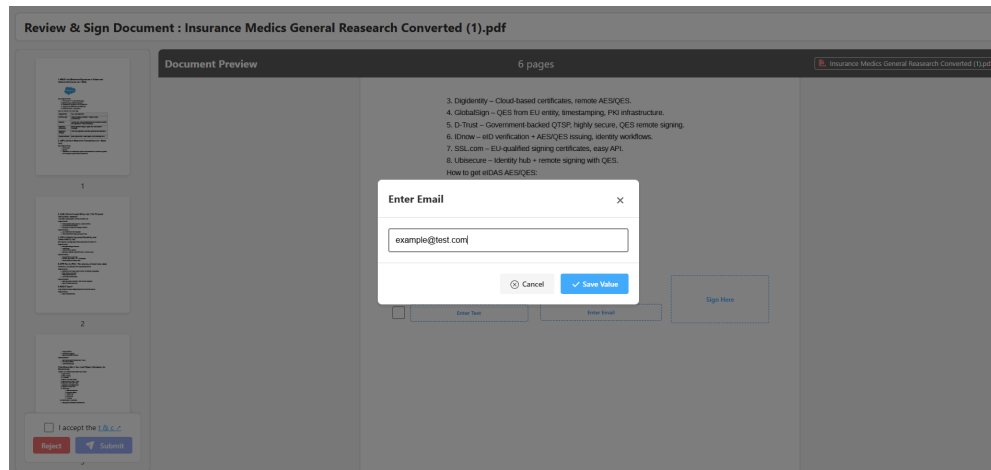

**2. UETA (Uniform Electronic Transactions Act – State Law)**

**Key Requirements**

- Intent to sign
- Consent
- Association with Record (Your system must associate the electronic signature with the specific signed record or document)

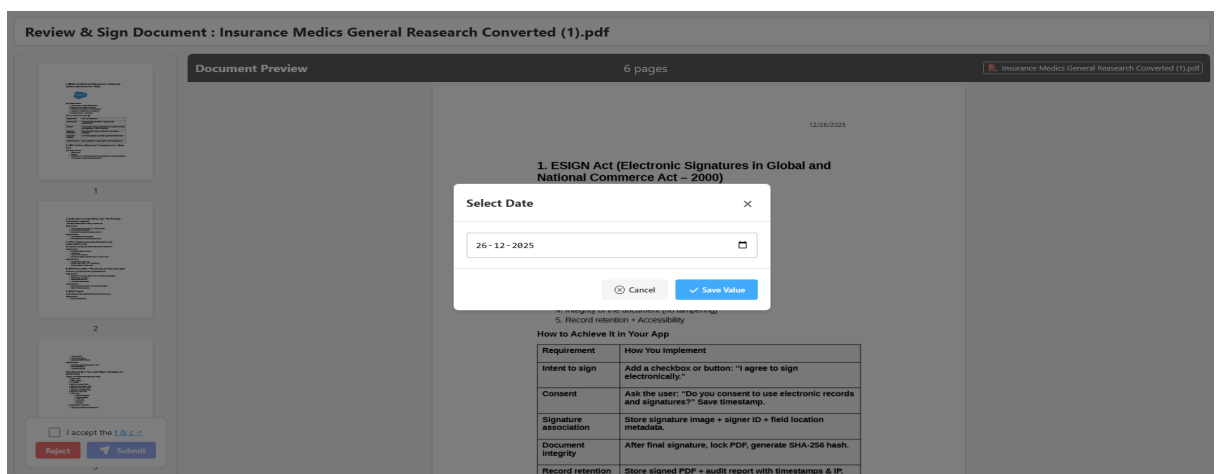

## 3. Email Field

- Click to activate inline editing
- Must contain valid email format (example@domain.com)
- Validation occurs on blur/submission
- Invalid emails show error message
- Can auto-populate with signer's email if configured

#### 4. Date Field

- Click to open date picker modal
- Select date from calendar interface
- Or manually type date in YYYY-MM-DD format
- Can default to current date if configured ("TODAY")
- Clear button available to remove selection

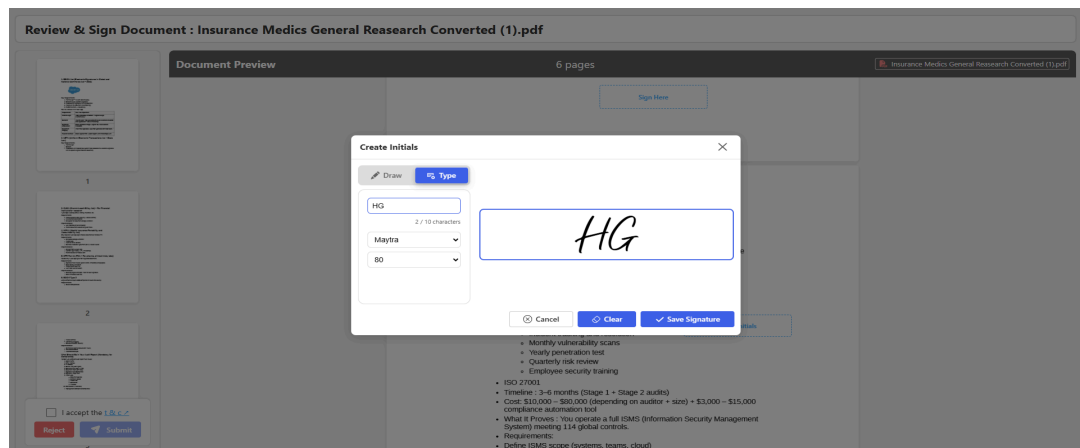

#### 5. Checkbox Field

- Click directly on checkbox to toggle (no modal required)
- Checked state shown with checkmark
- Unchecked state shown as empty box
- Toggles between true/false values
- Visual feedback on hover

## 6. Initials Field

- Click to open initials creation modal
- Same interface as signature modal (Draw/Type/Upload tabs)
- Smaller display area optimized for initials
- Auto-generates from name if default value configured
- Quick reuse available after first entry

## Field Behaviors & Properties

### 1. Required Fields

- Marked with red asterisk (\*)
- Must be completed before submission
- System blocks submission if incomplete
- Error toast appears listing missing required fields
- Count shown in error message

### 2. Optional Fields

- No asterisk indicator
- Can be left blank
- Document submits successfully without completion

### 3. Read-Only Fields

- Grayed out background
- Cannot be edited by signer
- Pre-filled by sender or system
- Display-only information
- Examples: Document ID, Sender name, Auto-populated dates

### 4. Default Value Fields

- Pre-populated with suggested values
- Can be modified unless marked read-only
- Special tokens:
  - {defaultValue}: Auto-fills based on field type
    - Signature: Full signer name
    - Initials: First letters of each name word
    - Email: Signer's email address
  - TODAY: Auto-fills current date (for date fields)
- Truncated to max length if specified

## 5. Maximum Length

- Character limit enforced for text/email fields
- Counter shows remaining characters (if configured)
- Prevents input beyond limit

## 6. Multiline Text

- Allows multiple lines of text input
- Press Enter for new line
- Word wrapping enabled
- Scrollable if content exceeds field height

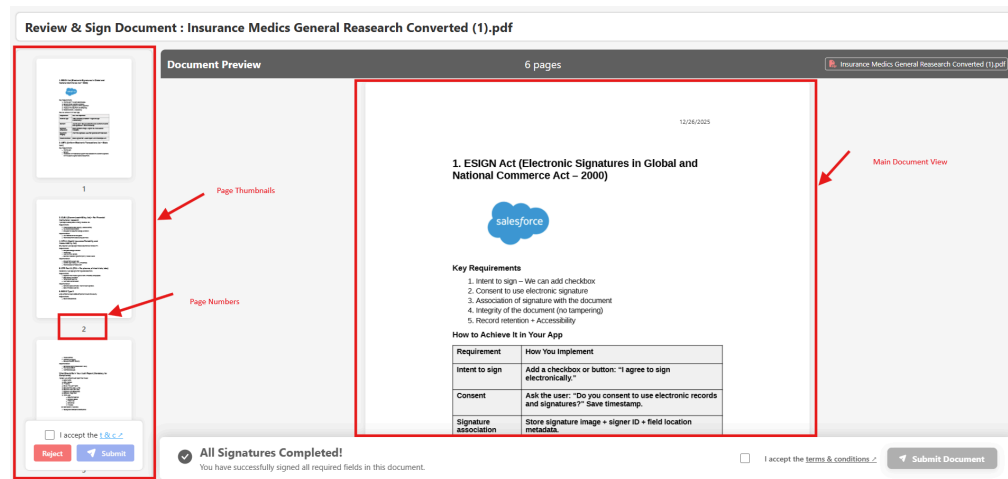

## Signing Behaviour

- **Priority-Based Sequential Signing**
  - Multiple signers assigned priority numbers (1, 2, 3, etc.)
  - You can only interact with fields assigned to YOUR priority
  - Fields for other priorities are visible but not clickable
  - Silently ignores clicks on other priority fields
  - Progress through document in order
- **Simultaneous Signing**
  - All signers receive links at the same time
  - Each signer completes only their assigned fields
  - No priority restrictions
  - Document completes when ALL signers finish
  - Real-time conflict prevention across browser tabs

## Document Navigation

- **Page Thumbnails (Left Sidebar)**
  - Shows mini preview of each page
  - Click thumbnail to jump to that page
  - Current page highlighted
  - Shows page number below thumbnail
  - Scrollable list for long documents

- **Main Document View (Center)**
  - Full-size page rendering
  - Scroll vertically through all pages
  - Zoom/scale adjusts to screen width
  - Responsive design for mobile devices
- **Page Numbers**
  - Displayed at top of each page section
  - Format: "Page X of Y"

## Submission Process

- **Pre-Submission Validation**
  - System checks all required fields are completed
  - Verifies all signatures are applied
  - Validates field formats (email, number, etc.)
  - Confirms you've accepted terms & conditions
- **Terms & Conditions**
  - Checkbox must be checked before submission
  - Link to terms opens in new tab
  - Located in footer and completion banner
- **Submit Button**
  - Only appears when you have fields to complete
  - Disabled until terms accepted
  - Shows spinner during processing
  - Grayed out when disabled
- **Completion Banner**
  - Appears when all your fields are complete

- Shows checkmark icon and success message
  - Sticky footer with submit action
  - Displays completion status
- **What Happens on Submit**
    - All signatures embedded into PDF
    - Form field values written to document
    - Audit trail generated (if configured)
    - Document hash created for security
    - PDF uploaded to Salesforce
    - Email notifications sent (if configured)
    - You're redirected to Thank You page

1. ESIGN Act (Electronic Signatures In Global and National Commerce Act - 2000)

Key Requirements

1. Intent to sign - We can add checkbox
2. Consent to use electronic signature
3. Association of signature with the document
4. Integrity of the document (no tampering)
5. Record retention + Accessibility

How to Achieve it in Your App

| Requirement    | How You Implement                                                                        |
|----------------|------------------------------------------------------------------------------------------|
| Intent to sign | Add a checkbox or button: "I agree to sign electronically."                              |
| Consent        | Ask the user: "Do you consent to use electronic records and signatures?" Save timestamp. |
| Signature      | Store signature image + signer ID + field location                                       |

☐ I accept the [T & C's](#)

☒ All Signatures Completed!  
You have successfully signed all required fields in this document.

☐ I accept the [terms & conditions](#)

**Thank You!**

Your document has been successfully signed and submitted.

- ☒ Document Signed
- ☒ Submitted Successfully
- ☒ Confirmation Sent

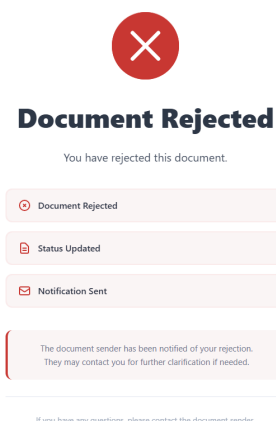

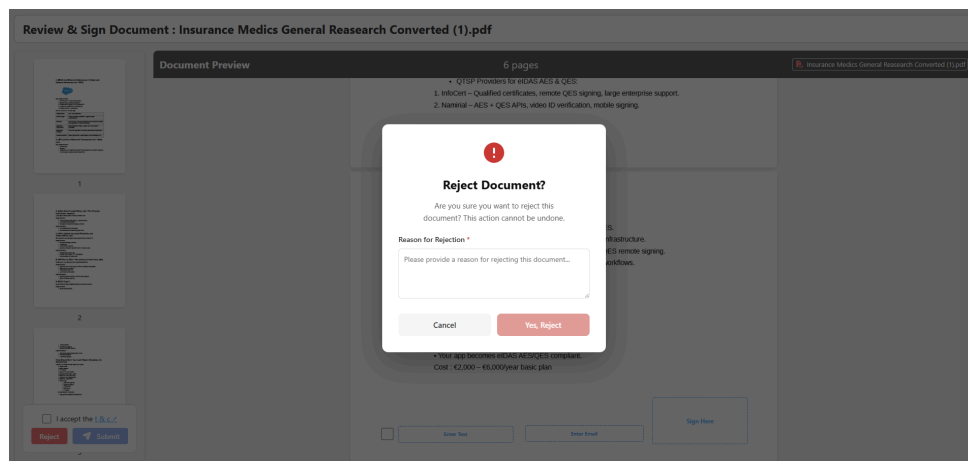

A confirmation email has been sent to your email address with a copy of the signed document.

If you have any questions, please contact the document sender.

## Rejection Flow

- **Initiating Rejection**
  - Click the Reject button in the footer
  - Rejection confirmation modal appears
  - Cannot be undone
- **Providing Rejection Reason**
  - Mandatory text area for rejection reason

- Minimum description required
  - Cannot submit rejection without reason
  - Example reasons: "Incorrect information", "Wrong document", etc.
- **Confirmation Modal**
  - Warning icon displayed
  - Clear messaging about action being permanent
  - Two buttons:
    - Cancel: Close modal, return to document
    - Yes, Reject: Confirm rejection (only enabled if reason provided)
  - Press ESC to cancel
- **After Rejection**
  - Document status updated to "Rejected"
  - Rejection reason saved
  - Email notification sent to sender (if configured)
  - Redirected to Rejection page
  - Cannot reopen or sign after rejection

## Advanced Features

- **Auto-Population**
  - Name fields auto-fill from signer profile
  - Email fields pre-populated with your email
  - Date fields can default to current date
  - Initials auto-generated from name
- **Real-Time Synchronization**
  - Opening same document in multiple tabs shows warning
  - Prevents double-submission
  - Auto-refreshes when submitted in another tab
  - BroadcastChannel API for cross-tab communication
- **Audit Trail (Automatic)**
  - Each signature/field captures:
    - IP Address: Your public IP
    - Timestamp: Exact date/time with timezone
    - Location: City, State, Country (GPS-based)
    - Device Info: OS and browser version
    - Device Unique Key: Browser fingerprint
    - Signature Type: Draw/Type/Upload method
- **PDF Hash Verification**
  - SHA-256 hash generated for final document
  - Ensures document integrity
  - Prevents tampering after submission
  - Stored in Salesforce for verification
- **Responsive Design**
  - Desktop: Full-width layout with sidebar
  - Tablet: Optimized spacing and touch targets
  - Mobile: Stacked layout, collapsible sidebar
  - Auto-adjusts page rendering to screen size

## Security Features

- **Document Encryption**
  - URL parameters encrypted
  - Secure data transmission
  - HTTPS required
- **Browser Compatibility**
  - Chrome (recommended)
  - Edge
  - Firefox
  - Safari

- Brave
- Opera

## **Toast Notifications**

- The system shows informative messages for:
  - Success: All signatures completed successfully!
  - Error: Please complete all required fields
  - Info: Document already submitted
  - Warning: Please provide rejection reason

# Dashboard

# Document Dashboard User Guide

## Overview

- The Document Dashboard provides a comprehensive view of all your documents and their signing status. It allows you to monitor, manage, and track document workflows efficiently.

## Document Table Features

- The Document table displays the following information for each document

| Column Name      | Description                                                                                                                                                                                             |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Document Id      | Unique identifier no for the document (on click of it, it redirects to the record page).                                                                                                                |
| Document Name    | Name of Uploaded Document.                                                                                                                                                                              |
| Status           | Status of Document<br><br><b>Sent</b> - Document has been sent to signees (Blue).<br><b>Completed</b> - All signatures collected (Green).<br><b>Rejected</b> - Document was rejected by a signee (Red). |
| Completed Date   | Date and time when all signatures were completed                                                                                                                                                        |
| Expiration Date  | Date when the document expires if not signed                                                                                                                                                            |
| Email Send Type  | Indicates if emails are sent <b>Simultaneously</b> or by <b>Priority</b>                                                                                                                                |
| Active           | Toggle switch to activate/deactivate the document<br><br>If the switch to deactivated at that time, then show the 404 page to sign year to all signers.                                                 |
| Action - Preview | Preview Final Document or initial Uploaded Document(if document is not completed)                                                                                                                       |
| Action - Delete  | Delete Document (If anyone has not signed)                                                                                                                                                              |

| Document Dashboard |                            |           |                    |                 |                 |                          | Filter by Status: All | Search documents... |
|--------------------|----------------------------|-----------|--------------------|-----------------|-----------------|--------------------------|-----------------------|---------------------|
| DOCUMENT ID        | DOCUMENT NAME              | STATUS    | COMPLETED DATE     | EXPIRATION DATE | EMAIL SEND TYPE | ACTIVE                   | ACTION                |                     |

| 21-30 of 553                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                            |                          |                    | Page 3 of 56       |                    |                                     |        |           |      |       |           |           |           |                 |        |   |               |                      |           |                    |                    |    |        |   |            |                       |           |                    |                    |    |        |   |          |                          |           |                    |                    |    |        |   |               |                        |           |                    |                    |    |        |

## Record-Specific Dashboard

- When the Document Dashboard is placed on a record page, it automatically filters to show only documents that were sent from that record using the Quick Action button.
- **How it works:**
  - Open any record (e.g., Opportunity, Account, Contract)
  - Click the Quick Action button to send documents from that record
  - The dashboard displays only those documents sent from that specific record
  - All filtering, searching, and functionality works within that record's document set
- **Example:**
  - If placed on an Opportunity record, you'll see only documents sent from that Opportunity

## General Functionality

- **Real-time Updates**
  - The dashboard automatically refreshes when:
    - Documents are created, updated, or deleted
    - Signees complete signing
    - Document status changes
- **Search Functionality**
  - Locate the search box in the top-right corner
  - Type any text to search across:
    - Document IDs
    - Document Names
    - Document Status
  - Search is case-insensitive
  - Results update instantly as you type
  - Search works across all documents, not just the current page

- Clear the search box to see all documents again
- **Filter Functionality**
  - Use the **Filter by Status** dropdown to narrow down documents:
  - Available Filters:
    - All - Shows all documents (default)
    - Sent - Shows only documents sent to signees
    - Completed - Shows only fully completed documents
    - Rejected - Shows only rejected documents
  - Select a status from the dropdown menu
  - The table automatically updates to show matching documents
- **Pagination Functionality**
  - Pagination resets to page 1 when filters change
  - Filters and search work together - you can search within filtered results
  - Additional Features of Pagination
    - Navigate through pages using First (<<), Previous (<), Next (>), and Last (>>) buttons
    - View current page number and total pages
    - See record count (e.g., "1-10 of 45")
    - Default: 10 documents per page
- **Conformation Popup**
  - Take confirmation before every major action like active/deactive, delete document, resend email to signee.

The screenshot shows a 'Document Dashboard' with a table of documents. A modal popup titled 'Confirm Delete' is centered over the table, asking for confirmation to delete a document named 'File.pdf'. The table has columns for Document ID, Document Name, Status, Completed Date, Expiration Date, Email Send Type, Active, and Action. The status of documents varies, including 'Completed', 'Rejected', and 'Sent'.

| DOCUMENT ID | DOCUMENT NAME              | STATUS    | COMPLETED DATE     | EXPIRATION DATE | EMAIL SEND TYPE | ACTIVE                   | ACTION |
|-------------|----------------------------|-----------|--------------------|-----------------|-----------------|--------------------------|--------|

# Administrator Setup

## Part 1: Administrator Setup

This section is intended for **Salesforce Administrators**. Complete all steps in order before rolling out SignAny to your users.

### 1.1 Create a Connected App

**Purpose:** A Connected App authorises the React signing application to access Salesforce data and write signatures and documents back to Salesforce.

**Note:** You only need to complete **either** section 1.1 or 1.2 - not both. Section 1.1 uses the classic Connected App flow; section 1.2 uses the newer External Client App flow. Check with your Salesforce version or admin preference.

**Steps:**

1. Go to Setup > External Client Apps > Settings and enable Allow creation of connected apps.
2. Click New Connection App.
3. In the Basic Information section, set the Connected App Name to SA Connect and enter your email address.
4. In the API (Enable OAuth Settings) section, check Enable OAuth Settings.
5. Set the Callback URL to <https://login.salesforce.com/>.
6. Under Selected OAuth Scopes, select Manage User Data via APIs (api).
7. Uncheck the following:
  - a. Require Proof Key for Code Exchange (PKCE) Extension for Supported Authorization Flows
  - b. Require Secret for Web Server Flow
  - c. Require Secret for Refresh Token Flow
8. Check Enable Client Credentials Flow and click Save.
9. Click Manage > Edit Policies.
10. Under Client Credentials Flow, set Run As User to the Least Accessible User (see section 1.3) and click Save.
11. Go to Setup > App Manager, find SA Connect, and select View from its dropdown.
12. In the API (Enable OAuth Settings) section, click Manage Consumer Details and verify your identity.
13. Copy and securely store the Consumer Key and Consumer Secret.

**Important:** Do not assign the System Administrator as the Run As User. This grants excessive permissions to the signing integration.

[Screenshot: Connected App OAuth Settings screen]

### 1.2 Create an External Client App

**Purpose:** Same as section 1.1, but using the External Client App Manager - the recommended path for newer Salesforce orgs.

**Steps:**

1. Go to Setup > External Client Apps > External Client App Manager.
2. Click New External Client App.
3. Set the External Client App Name to SA Connect and enter your email in Contact Email.

4. In the API Settings section, check Enable OAuth.
5. Set the Callback URL to <https://login.salesforce.com/>.
6. Under OAuth Scopes, select Manage User Data via APIs (api).
7. Under Flow Enablement, check Enable Client Credentials Flow.
8. Under Security, deselect:
  - a. Require Secret for Web Server Flow
  - b. Require Secret for Refresh Token Flow
  - c. Require Proof Key for Code Exchange (PKCE) Extension for Supported Authorization Flows
9. Click Create.
10. On the next screen, go to the Policies tab and click Edit.
11. Under OAuth Flows and External Client App Enhancements, check Enable Client Credentials Flow.
12. Enter the username for the Least Accessible User and click Save.
13. Go to Settings > OAuth Settings and click Consumer Key and Secret, then verify your identity.
14. Copy and securely store the Consumer Key and Consumer Secret.

**Important:** Do not assign the System Administrator as the Run As User.

[Screenshot: External Client App creation screen]

### 1.3 Create the Least Accessible User

**Purpose:** Creates a dedicated integration user for SignAny to restrict access and maintain a clear audit trail of changes made by the application.

**Steps:**

1. Go to Setup > Users > Users and click New User.
2. Set the name to exactly SignAny Integration User.

**Important:** Any other name will cause incorrect timezone and location data to appear in Audit Reports.

3. Set User License to Salesforce.
4. Set Profile to Minimum Access - Salesforce.
5. Ensure the user is set to Active.
6. Click Save.
7. From the Permission Set Assignment section, click Edit Assignments.
8. Add Sign Any Object/Metadata Permissions and click Save.

### 1.4 Set Up Change Data Capture

**Purpose:** Enables real-time data updates via message channels for Admin Properties and Document records.

**Steps:**

1. Go to Setup > Integrations > Change Data Capture.
2. From Available Entities, move the following to the Selected Entities list:
  - a. Admin Properties (Admin\_Properties\_\_c)
  - b. Document (Document\_\_c)
3. Click Save.

## 1.5 Enable Lightning Web Security

**Purpose:** Required to display PDF file previews within the application.

**Steps:**

1. Go to Setup > Security > Session Settings.
2. Under Lightning Web Security, check Use Lightning Web Security for Lightning web components and Aura components.
3. Click Save.

**Important:** If this setting is skipped, users will not be able to preview uploaded PDF files.

## 1.6 Configure Email Deliverability

**Purpose:** Allows Salesforce to send signing invitation emails to document signers.

**Steps:**

1. Go to Setup > Email > Deliverability.
2. Under Access to Send Email (All Email Services), set Access Level to All email.
3. Click Save.

**Note:** As of December 2025, emails are sent via Gmail Integration. This will be migrated to Salesforce Messaging Class Emails in a future release.

## 1.7 Admin Panel Configuration

**Purpose:** The Admin Panel provides global configuration options that control document behaviour and the signer's signature pad experience across all documents in the org. The Admin Panel is divided into two sections:

### Document Settings

Controls how the system prepares and processes documents before and during signing.

#### Setting Description

**Email Object** Determines which Salesforce object provides signer name and email values. When set (not "None"), the signer selection screen shows a picklist of that object's records. Selecting a record auto-fills name and email; the email becomes non-editable.

**Email Field** Defines which field from the Email Object supplies the email address.

Example: Email Object = Contact, Email Field = Email → Contact name and email are auto-populated.

**Audit Report Behaviour** Separate — generates a standalone audit PDF. Attached — appends audit pages to the end of the signed document PDF.

**Store Signature as Record** When enabled, each captured signature is saved as a ContentVersion record linked to its Signature\_\_c object (master-detail with Document\_\_c). When disabled, signatures are stored in Salesforce but no ContentVersion is created.

**Send Email After Signing** When enabled, both the signer and the document sender receive a notification email upon signature completion. When disabled, the workflow progresses silently.

[Screenshot: Document Settings panel]

### Signature Pad Configuration

Controls the appearance and available tools on the signing pad shown to signers.

#### Setting Description

**Hide Pen and Erase Option** Hides the Pen and Erase controls from the drawing popup. Useful when only typed signatures are allowed.

**Hide Brush Size Option** Removes the brush thickness control. When hidden, the default brush size is always used.

**Brush Size** Default drawing stroke size (range: 1–10). Applies to both pen and eraser when brush size controls are hidden.

**Hide Undo and Redo Options** Removes the ability for signers to undo or redo drawing actions.

**Hide Available Fonts Option** Prevents signers from switching fonts while typing a signature. Locks the appearance to the default font.

**Font Style** The default font displayed when a signer types a signature.

**Available Font Styles** A dual picklist for selecting which fonts signers can choose from. Only listed fonts appear as options.

**Hide Bold Option** Removes bold formatting from the typed signature interface.

**Hide Italics Option** Removes italic formatting from the typed signature interface.

**Hide Font Size Option** Hides the font-size dropdown, forcing all typed signatures to use the default size.

**Font Size** Default size for typed signature text.
